

abb india robotics division

The robotics division of ABB India underwent a massive restructuring where ABB India Limited officially transferred its entire robotics business to a standalone group subsidiary, ABB Robotics India Private Limited, for a valuation of ₹1,568.2 crore. This strategic shift aligns with a global parent-level transaction where the [SoftBank Group](#) is acquiring ABB's global robotics arm for \$5.4 billion. This allows ABB India to double down exclusively on its core electrification and heavy automation industries. 📰 The Times of India +3

Operational Footprint in India

Despite the corporate restructuring, the local operational entity continues to actively scale up and service the Indian automation market under the leadership of President [Subrata Karmakar](#). 📄

- **Pune Infrastructure Expansion:** The division recently expanded its footprint by inaugurating a major new regional office in **Pune**. The location aims to capture precision automation requirements from India's rapidly growing electric vehicle (EV) manufacturing hub and small-to-medium enterprises (SMEs). 📄 LinkedIn · ABB Robotics
- **Bengaluru Experience Hub:** The entity continues to anchor customer application testing at its state-of-the-art solution delivery facility in **Bengaluru**. The tech hub houses an advanced paint lab, robot simulation setups driven by [ABB RobotStudio software](#), and automated welding prove-out labs. 📄 ABB +4

Core Product Portfolio Available in India

The specialized portfolio serves major manufacturing verticals like automotive, e-commerce logistics, and electronics assembly lines: 📄 ABB +2

- **Articulated Industrial Robots:** Diverse 6-axis hardware configured for machine tending, material handling, arc welding, and heavy material dispensing. 📄 ABB
- **Collaborative Robots (Cobots):** Safety-calibrated robots engineered to operate side-by-side with humans on assembly lines without defensive safety fencing. 📄 ABB +3
- **Autonomous Mobile Robots (AMRs):** Intelligent, AI-powered floor fleets used to automate internal logistics and warehouse picking routes. 📄 ABB +2
- **High-Speed Pickers:** Delta and SCARA robot models engineered for extreme high-speed packaging, sorting, and small-component electronic testing. 📄 ABB

Why the Transformation Occurred

1. **The Global SoftBank Acquisition:** SoftBank Group entered a definitive agreement to acquire ABB's global robotics division to anchor its upcoming "Physical AI" vision, merging structural automation with deep learning. 📰 The Times of India +1

Ask anything

How big is the team in ABB robotics and how is their hiring trend after the softbank acquisition ?

Team Size

ABB Robotics globally employs approximately 7,000 people across 44 countries.

Following the landmark \$5.4 billion acquisition by SoftBank Group Corp., this workforce has transitioned into a standalone business entity operating independently from ABB's traditional parent group. S&P Global +3

In India, while ABB Group as a whole maintains a workforce of over 10,000 employees, the localized robotics arm operates under the newly formed **ABB Robotics India Private Limited**. Based out of major hubs like Bengaluru and Pune, this specialized local team constitutes several hundred engineering, software, R&D, and service professionals. LinkedIn · ABB Robotics +2

Hiring Trends Post-SoftBank Acquisition

Because SoftBank is buying ABB Robotics explicitly to champion "**Physical AI**" (merging structural robotics with generative artificial intelligence), the division's hiring trends have undergone a major shift from traditional industrial engineering toward cutting-edge software roles. LinkedIn · Chandler Dow... +3

- **Pivot Toward Digital & AI Profiles:** Recruiting focus has pivoted aggressively toward software engineering, cloud architecture, deep learning, and advanced data analytics. Instead of looking solely for traditional mechanical assembly and floor field technicians, the standalone entity is actively seeking professionals who can build connected, AI-enabled robotic ecosystems. Robotics Tomorrow
- **Leadership Scaling & Structuring:** A major structural talent shift occurred, highlighted by the appointment of [Praveen Voona as HR Leader – People & Culture Business Partner](#) for India, the Middle East, and Africa. This leadership expansion is

active recruitment continues simultaneously across traditional [ABB Group Career Portals](#) and global recruitment platforms like LinkedIn, [Naukri](#), and [Glassdoor](#). The pipeline remains dense for roles in Bengaluru, including Global Leadership Executive Assistants, R2R Specialists, and Robotic Simulation Engineers. ABB Career +4

Are you considering **applying for a role** at ABB Robotics India, and if so, would you like guidance on the **required skill sets** for their AI or core automation engineering engineering tracks?

How many people are in ABB robotics india , a best guess estimate

A best-guess estimate places the team size of **ABB Robotics India Private Limited at roughly 350 to 500 employees**.

While corporate filings do not publish a standalone headcount for the newly carved-out robotics business, this figure is calculated using several concrete institutional data points:

The Data Breakdown

- **Revenue Proportion Analysis:** In the [annual financial disclosures of ABB India Limited](#), the robotics business generates **₹444.42 crore**, which constitutes **3.6% of ABB India's total domestic revenue**.
- **Total ABB India Workforce:** The total headcount for the parent entity (ABB India Limited) is [officially reported at approximately 5,027 employees](#). Mapping a 3.6% revenue proportion to headcount yields roughly **180–200 core operational, sales, and service employees** assigned to the regional business. ABB
- **The Global Engineering Factor:** ABB heavily utilizes India for global backend engineering. The local entity houses a massive R&D, application development, and software team in Bengaluru and the newly launched Pune facility that directly

AI software in Bengaluru or the Industrial/Automotive Field Sales division in Pune?

How does this compare to FAnuc and KUKA robotics in India ?

In India, the industrial robotics market is famously dominated by the "Big 4" global players: FANUC, ABB, KUKA, and Yaskawa. While ABB is rapidly scaling up its workforce under its new software-driven vision, it positions itself right in the middle of its competitors in terms of local headcount and organizational footprint. [LinkedIn · Manish Verma](#)

The structural comparison highlights distinct operational differences across the top three players:

Executive Comparison Matrix (India Footprint)

Metric	ABB Robotics India	FANUC India	KUKA India
Est. India Team Size	350 – 500 employees	530 – 780+ employees	~77 – 100 employees
India Annual Revenue	~₹444.42 Crore	> ₹1,000 Crore	₹100 – ₹500 Crore
Headquarters / Hubs	Bengaluru & Pune	Electronics City, Bengaluru	Gurugram & Pune
Core Market Strength	Digital Integration & Painting	Heavy Machining & CNC Uptime	Automotive & Heavy Payload
Parent Ownership	Standalone (SoftBank)	Standalone Public	Standalone (Midea)

- **Team Structure:** Their larger workforce of 530+ on-site personnel is heavily weighted toward **Field Application Engineers and Maintenance Technicians**. Tracxn
- **Focus:** Because FANUC commands a massive share of the [CNC machine controller market](#), their hiring leans toward factory floor integration and mechanical uptime engineering rather than high-level cloud software. Wikipedia +3

2. KUKA India: The Lean Specialist

KUKA operates a lean, highly specialized team in India, maintaining roughly **77 to 100 core employees** primarily out of Gurugram and Pune. Tracxn +2

- **Team Structure:** KUKA relies extensively on a powerful network of **third-party System Integrators** to deploy their machinery on production lines. Robotics Center of Silicon ...
- **Focus:** Their corporate headcount remains low because their staff consists primarily of elite project managers, heavy-payload experts, and specialized automotive line designers who handle European vehicle assembly plants.

3. ABB Robotics India: The Software Pivot

ABB occupies a unique middle ground with 350–500 employees. What differentiates ABB's headcount is the **high ratio of global R&D and digital engineering roles** over pure field services.

- **Team Structure:** While FANUC hires for mechanical reliability and KUKA hires for line engineering, ABB's hiring pipeline is aggressively pursuing **AI, ROS (Robot Operating System), and simulation experts**. AmbitionBox
- **Focus:** Backed by SoftBank's vision, ABB is using its substantial Indian engineering presence to pivot into a software-first automation entity.

Are you weighing these options to figure out **which company has the best work culture**, or are you a client looking to see **who offers the best localized support network** for a manufacturing plant?
